Notes:

1. On receipt of the booking form and payment, we will send delegates confirmation of the booking, with details of the training location. The cost of the course is £1900.00 + VAT (total £2232.50) per delegate.
2. Closing date for booking forms one month prior to the course start date.
3. Cancellations: 14 days notice is required by delegates wishing to cancel their course booking or no refund will be paid.
4. SERAC reserve the right if payment is not received 14 days prior to the commencement of the course or if it is not adequately booked to cancel or postpone the course.

Introduction:

The course content has been developed by SERAC as one of the routes to achieve competence under the Environmental Permitting Regulations 2007.

As a Vocationally Related Qualification (VRQ) – Level 3 is an intensive classroom based course covering topics required by the CIWM/WAMITAB Operator Competence Scheme in order to operate a waste or resource management facility. SERAC has been approved by WAMITAB to deliver this qualification.

Target audience:

Those personnel requiring a VRQ to operate a medium risk facility under the Regulations, or other personnel who require learning in the principle issues for managing a waste or resource management facility.

The course is designed for current Managers and Supervisors of these facilities or those who will be undertaking this type of role. In order for delegates to be able to successfully undertake this course the participants need to have a minimum level of education and/or previous waste/resource management experience. All delegates wishing to attend this course will need to complete the delegate booking form. This must be approved by SERAC before the booking can be confirmed.

Aims:

- To achieve a Certificate in Wastes and Resource Management – Level 3 VRQ.
- Understand the relevant environmental, Health and Safety, government policy, legislation, permit compliance and technical issues.

Course content:

An overview of the six Units (five mandatory and one optional) is provided in our Award Overview. The optional Unit will be delivered at the end of the course with groups broken into the optional routes of Physical/Chemical, Biological, Thermal Treatment, Land Remediation or Inert Landfill.

The learning objectives and further details of the curriculum topics can be supplied on request or visit our website.

Teaching and Assessment Methods

The course is run over 4 days (0900 – 1730 approx.) – this will normally require delegates to stay overnight in order to complete the course work. Learning material is delivered via PowerPoint, group sessions, case studies, and exercises.

Delegates will for each Unit complete a scenario based written assessment based on the topics for that Unit. Delegates will complete these papers using an 'open book' approach.

Following the course each delegate must also complete a work-based assignment (maximum of 3-4,000 words) designed to relate the knowledge gained to the candidate's permitted facility. For new or planned facilities the assignment can be written to relate knowledge to the draft planning / permit and working plan / operational procedures etc. for that facility. The assignment must be completed within 10 weeks from the completion of the course.

The Unit scenarios and assignment are assessed independently from the tutor. A satisfactory pass must be achieved in all of these prior to the issue of the Certificate.
